The image shows two dialog boxes from MicroStation. The left dialog is 'DGN File Settings' with a sidebar containing categories like 'Active Angle', 'Active Scale', 'Axis', 'Color', 'Element Attributes', 'Fence', 'Grid', 'Isometric', 'Locks', 'Rendering', 'Snaps', 'Stream', 'Views', and 'Working Units'. The 'Working Units' category is selected. The main area is titled 'Modify Working Unit Settings' and includes fields for 'Linear Units' (Format: MU, Custom button, OK/Cancel buttons), 'Master Unit' (Meters, Label: mu), 'Sub Unit' (Decimeters, Label: su), and 'Accuracy' (0.1234). Below this is an 'Advanced Settings' section with 'Resolution: 10000 per Distance Meter', 'Working Area: 9.0072E+008 Kilometers', 'Solids Area: 429.497 Kilometers', and 'Solids Accuracy: 4.29497E-006 Meters' (with an Edit button). The 'Angles' section shows 'Format: DD.DDDD', 'Mode: Conventional', and 'Accuracy: 0.1234' next to a small diagram of an angle labeled '60.1235'. At the bottom is a 'Focus Item Description' field containing 'Advanced Unit Settings'.

The right dialog is 'Advanced Unit Settings'. It has a 'Unit Type' dropdown set to 'Distance'. Below it is a 'Resolution' section with a text box containing '10000', the word 'per', and a dropdown set to 'Meter'. The 'Working Areas (each axis)' section contains 'Total: 900719925 Kilometers' and 'Solids: 429.496730 Kilometers'. At the bottom, it states '* Solids Accuracy: 4.29497E-006 Meters' and has 'OK' and 'Cancel' buttons.

The image shows the 'Copy as Projection' dialog box. It has a title bar with a MicroStation icon and window controls. The 'Proj. onto Plane Def. by' dropdown is set to 'Shape'. Below it is a 'Tolerance' text box containing '0.0200'. There are two checkboxes: 'Extrude' (checked) and 'Add Dropped Element' (unchecked).

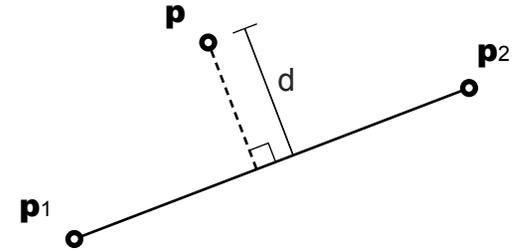

Point on Line

Is point **p** on line L?

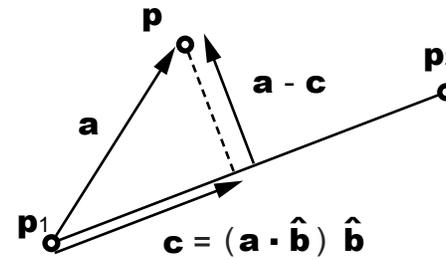

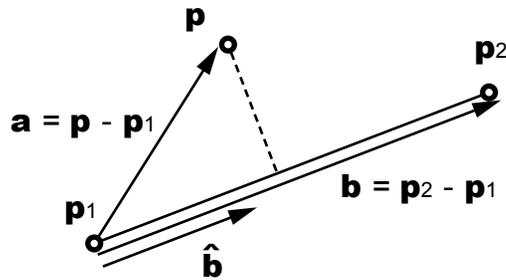

distance between **p** and L < tolerance

Distance between Point and Line (= Finding Closest Point On Line = Projection of Point to Line)

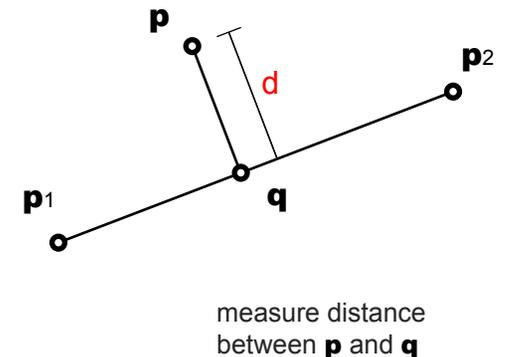

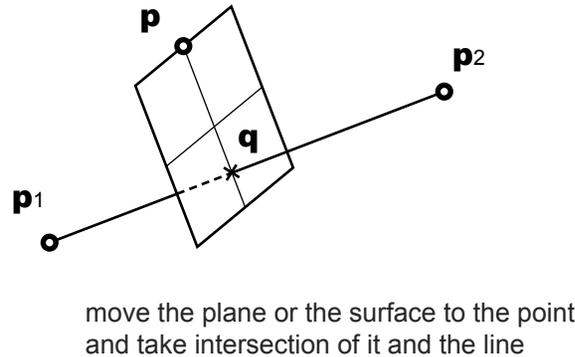

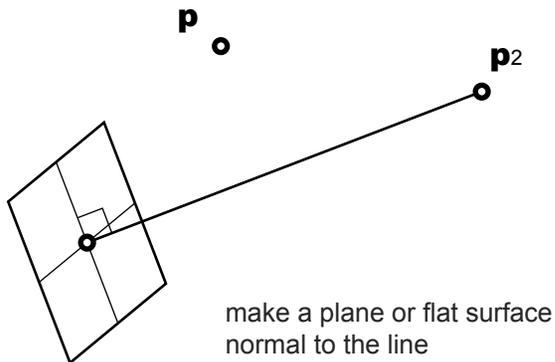

By Vector

$$d = |a - c|$$

$$= |a - (a \cdot \hat{b}) \hat{b}|$$

By Geometry

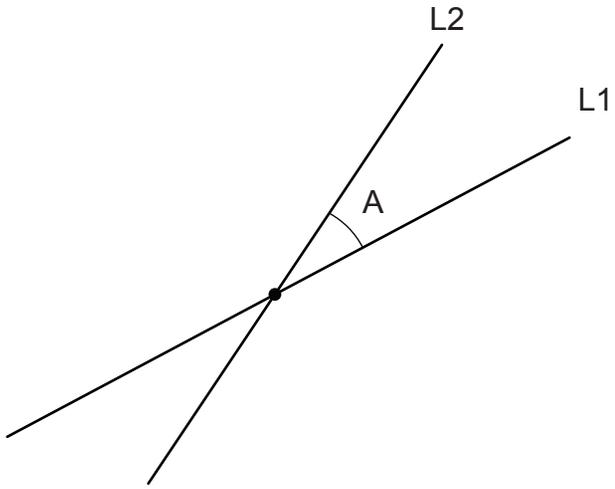

By Formula

Line : $\frac{x - q_x}{a} = \frac{y - q_y}{b} = \frac{z - q_z}{c}$

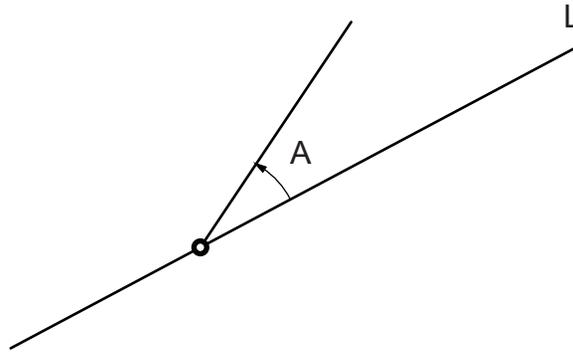

Point : $p = (p_x, p_y, p_z)$

when $x' = p_x - q_x$ $y' = p_y - q_y$ $z' = p_z - q_z$

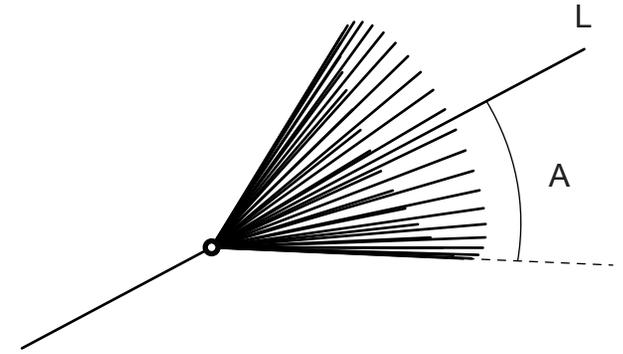

$$d = \sqrt{\frac{(b^2 + c^2)x'^2 + (c^2 + a^2)y'^2 + (a^2 + b^2)z'^2 - 2abx'y' - 2bcy'z' - 2caz'x'}{a^2 + b^2 + c^2}}$$

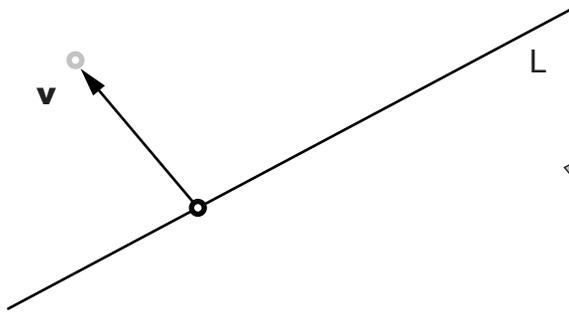

Measuring Angle of Line L1 and L2

Line having angle A to L

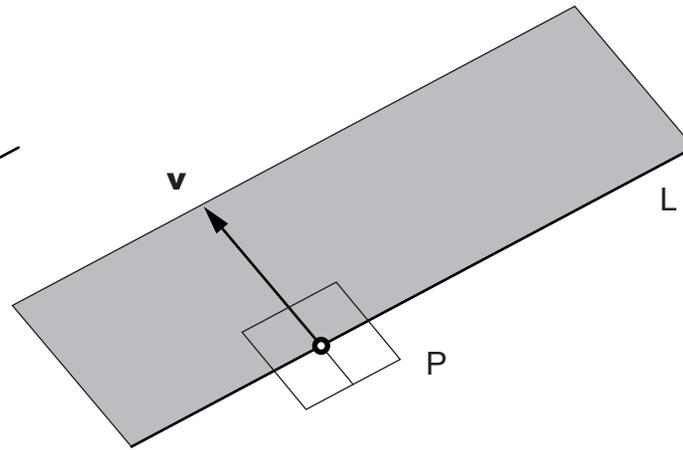

Possible Line having angle A to L

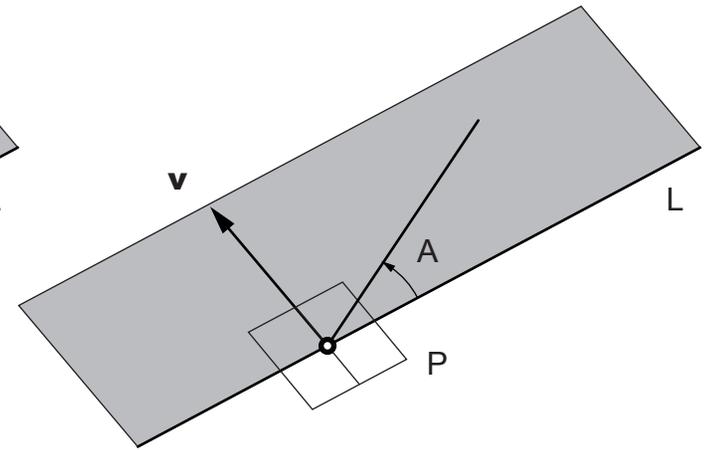

Define Direction by Vector \mathbf{v}

(Or by Point and Creating Vector out of it)

Plane P Defined by Line L and Vector \mathbf{v}

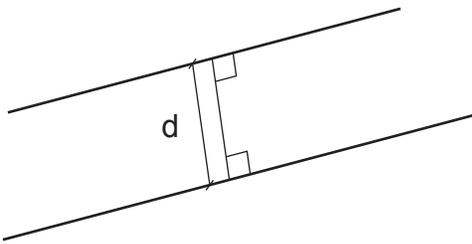

Rotate on Plane P

Distance of 2 lines = Minimum distance between all possible pair of points on each line

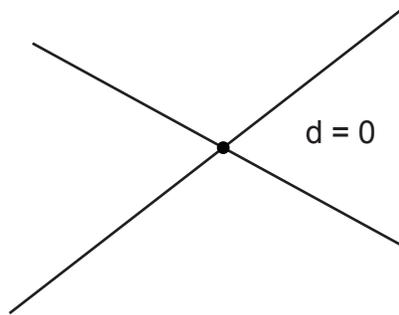

PARALELL LINES

Distance is equals to length of line perpendicular to both lines.

Such line can exist anywhere.

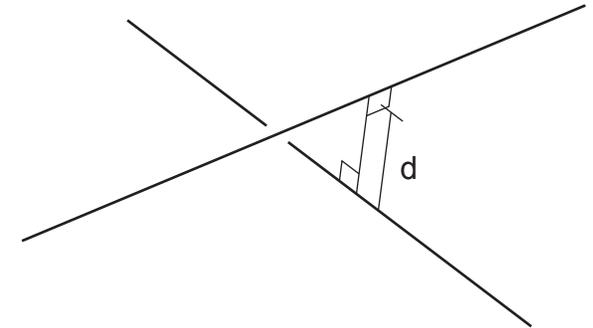

INTERSECTING LINES

Distance is zero at intersection.

Only one intersection can exist.

SKEW LINES

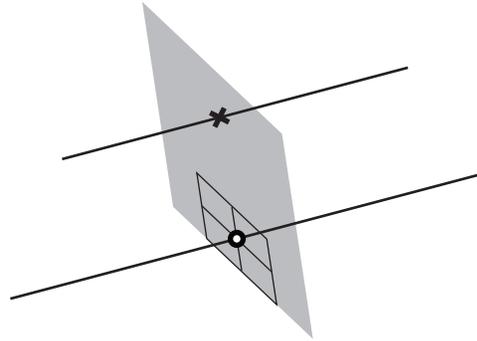

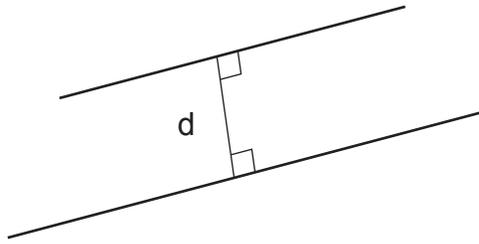

Distance is equals to length of line perpendicular both lines.

Only one such line can exist.

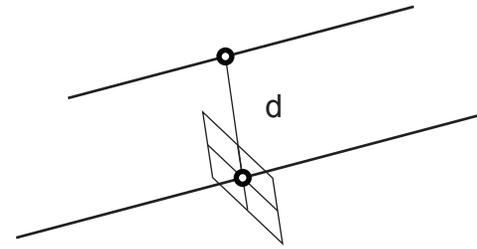

PARALELL LINES

By Plane and Intersection

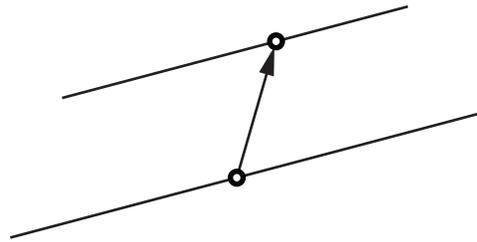

make a plane parpendicular to a line and take intersection

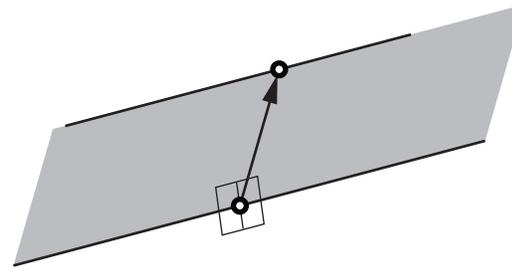

measure distance between the original point and the intersection point

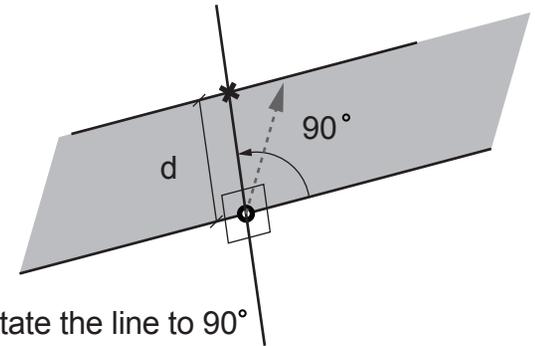

By Vector, Plane and Rotation

take any point on each line and create a vector

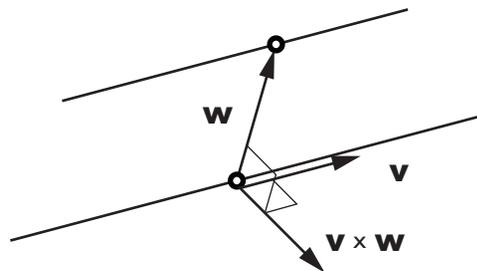

make plane with the line and the vector

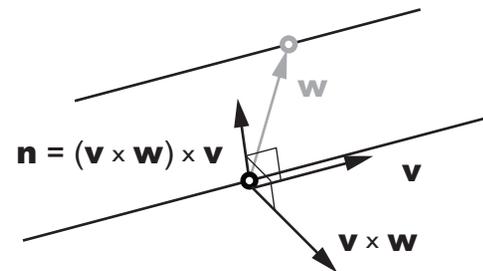

rotate the line to 90° and take intersection

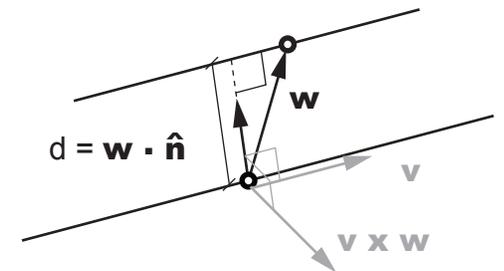

By Vector, Cross Product, Dot Product

take cross product of the line vector \mathbf{v} and the vector between two line \mathbf{w}

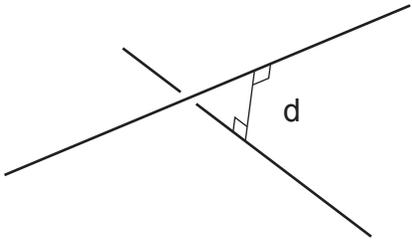

take cross product of the cross product and \mathbf{v}

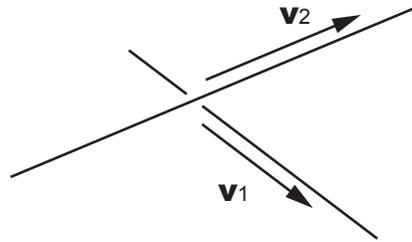

take dot product of \mathbf{w} and unitized second cross product

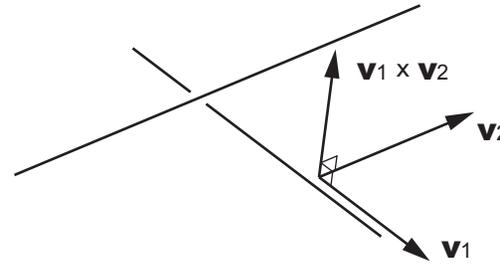

SKEW LINES

1. Cross Product

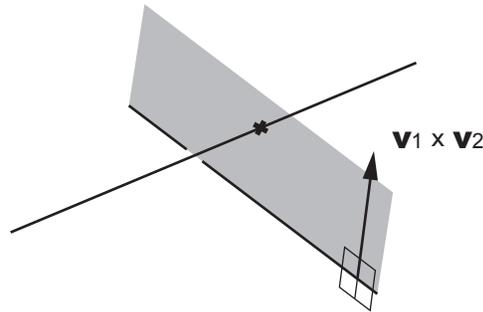

take two vectors of each line

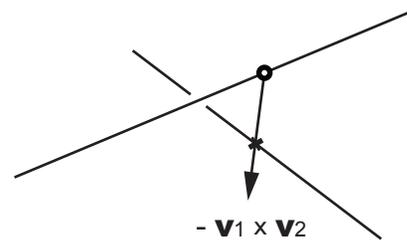

take cross product

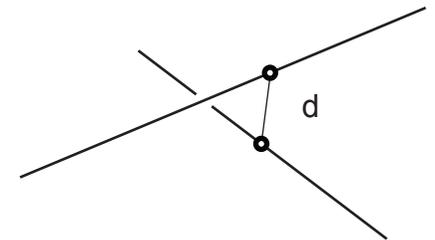

2A. Pland and Intersection

create a plane by the line and the cross product and take intersection

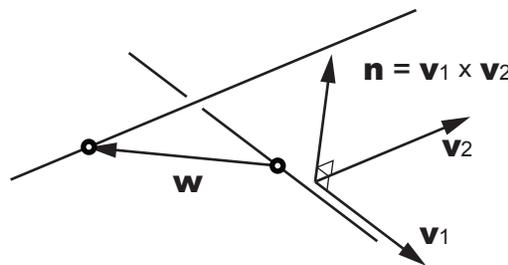

create a line toward the opposite direction of the cross vector and take intersection

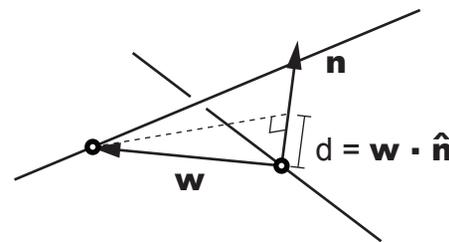

measure two intersection point

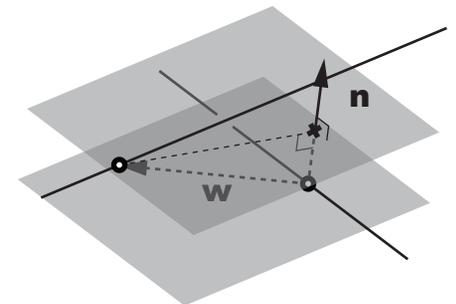

2B. Dot Product

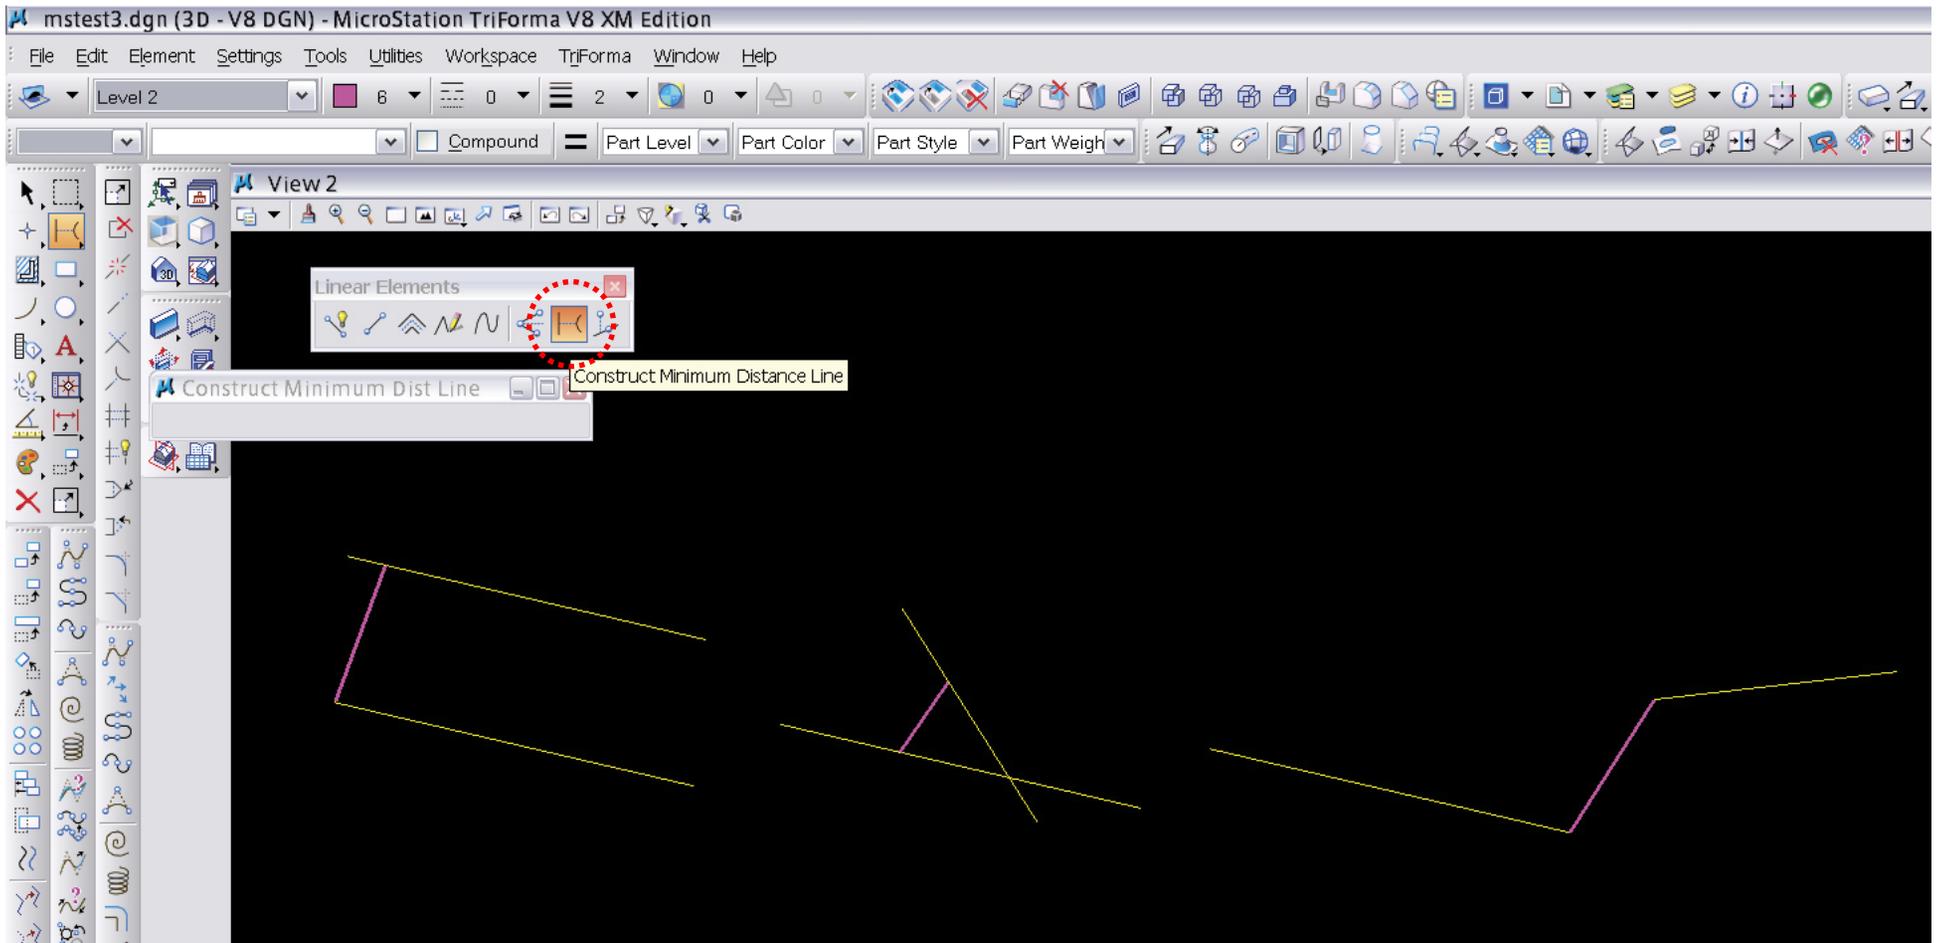

take a point on each line and create a vector **w**

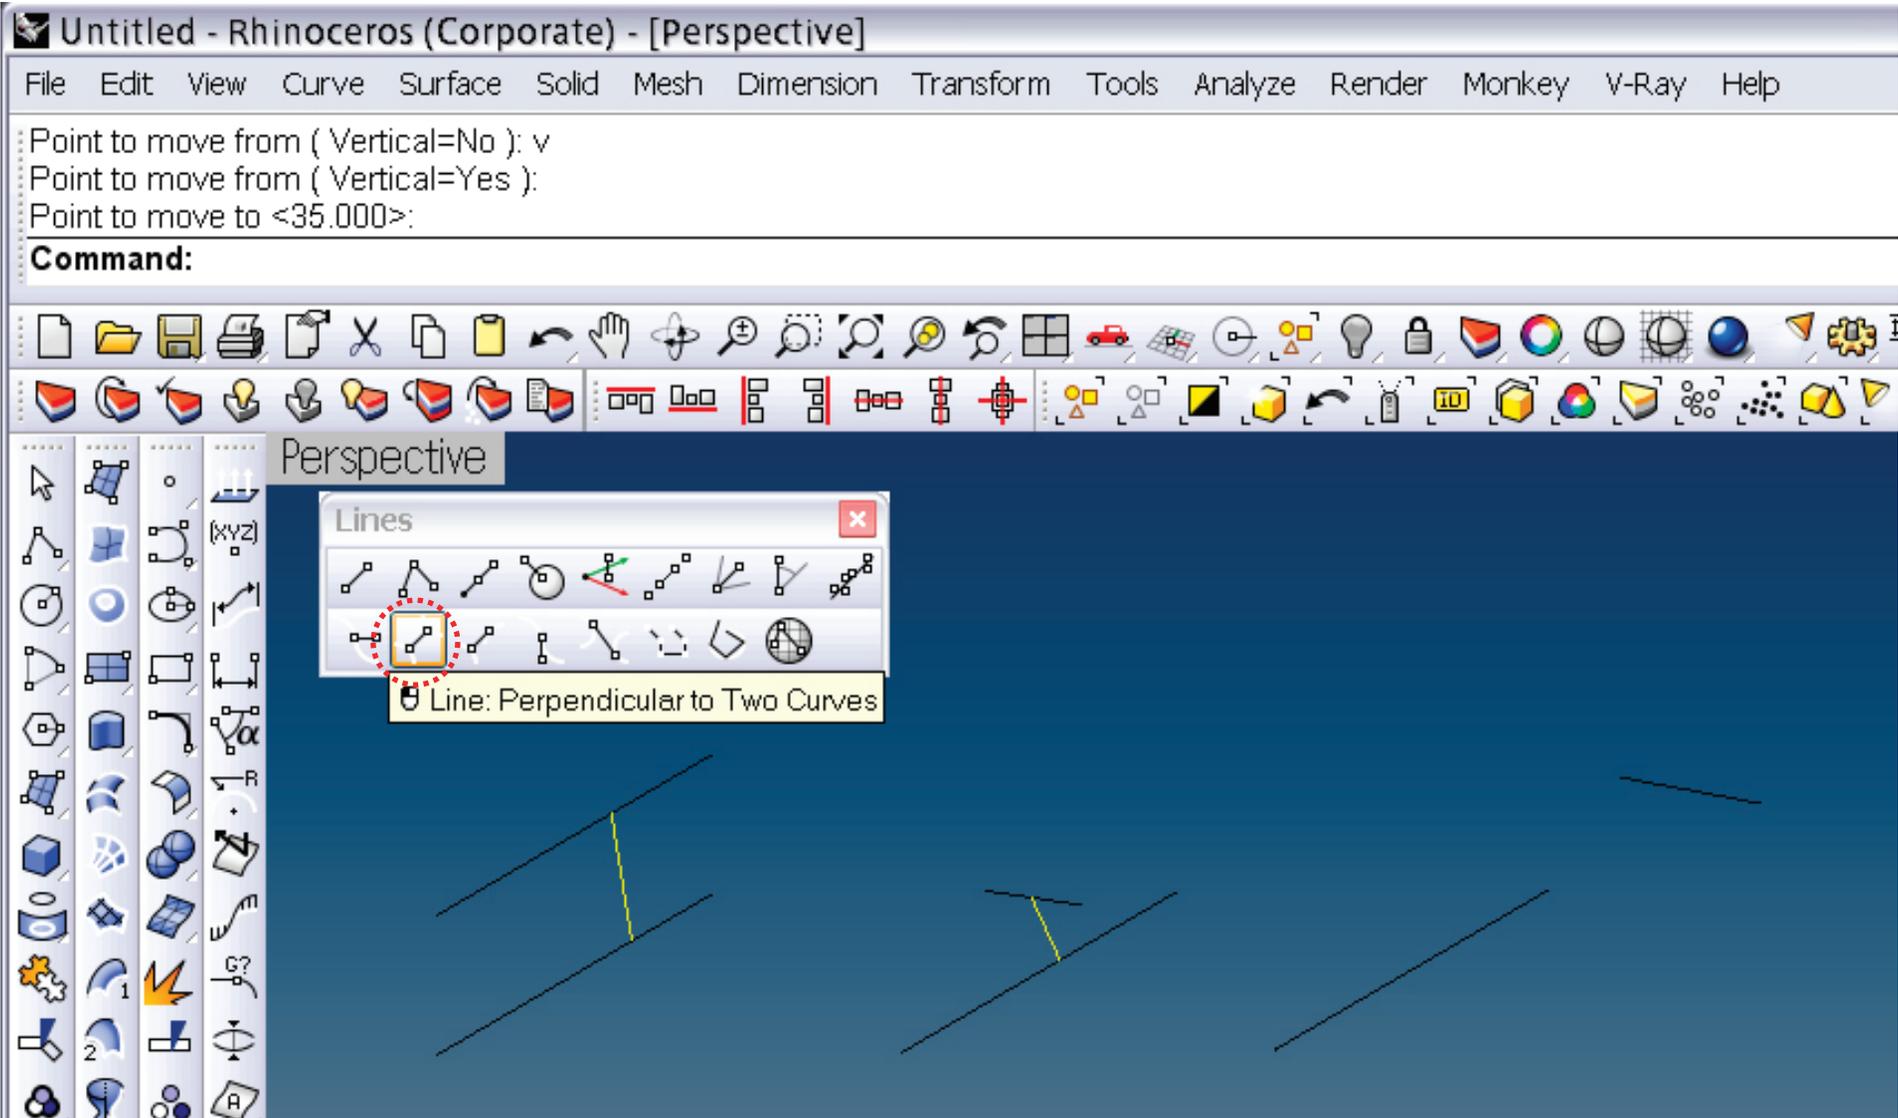

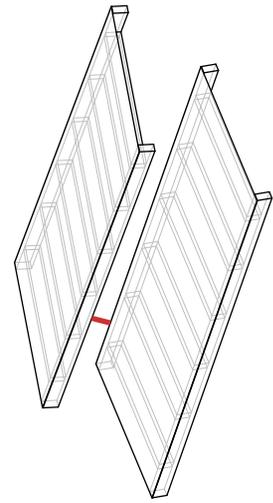

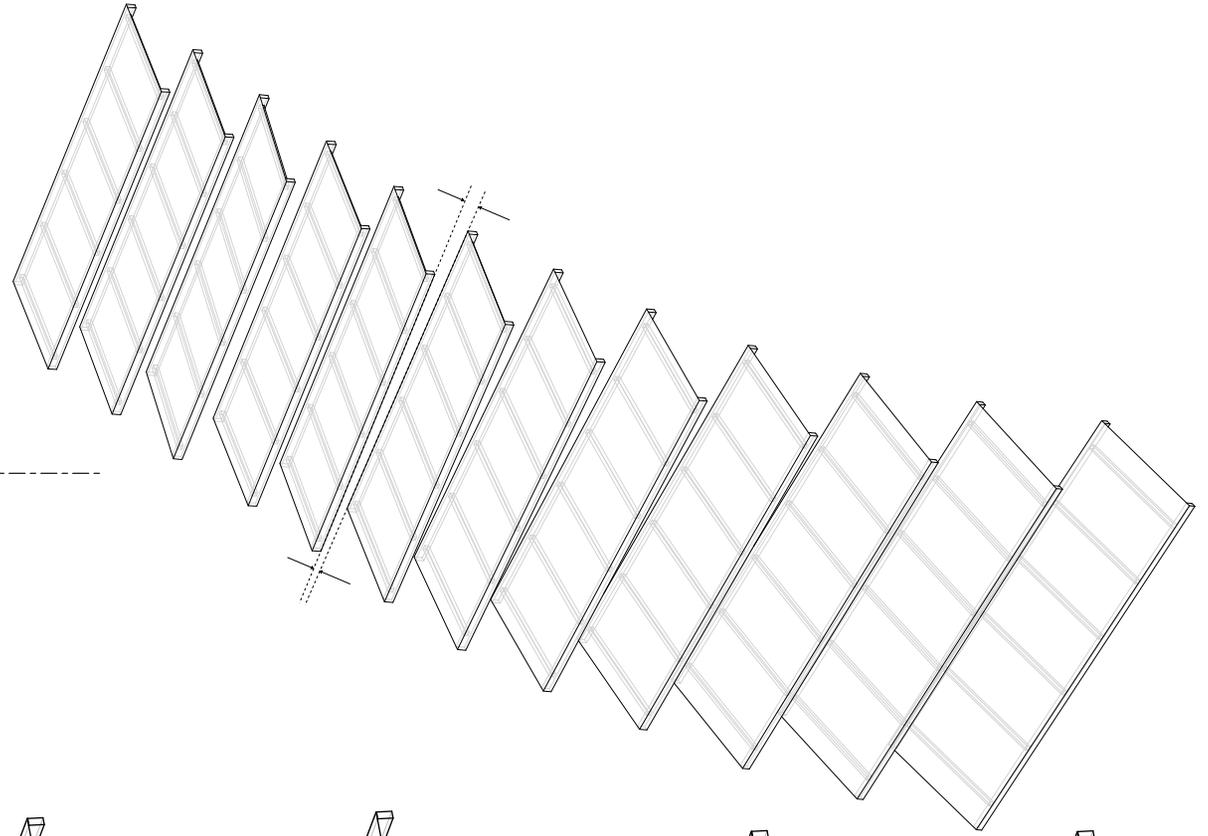

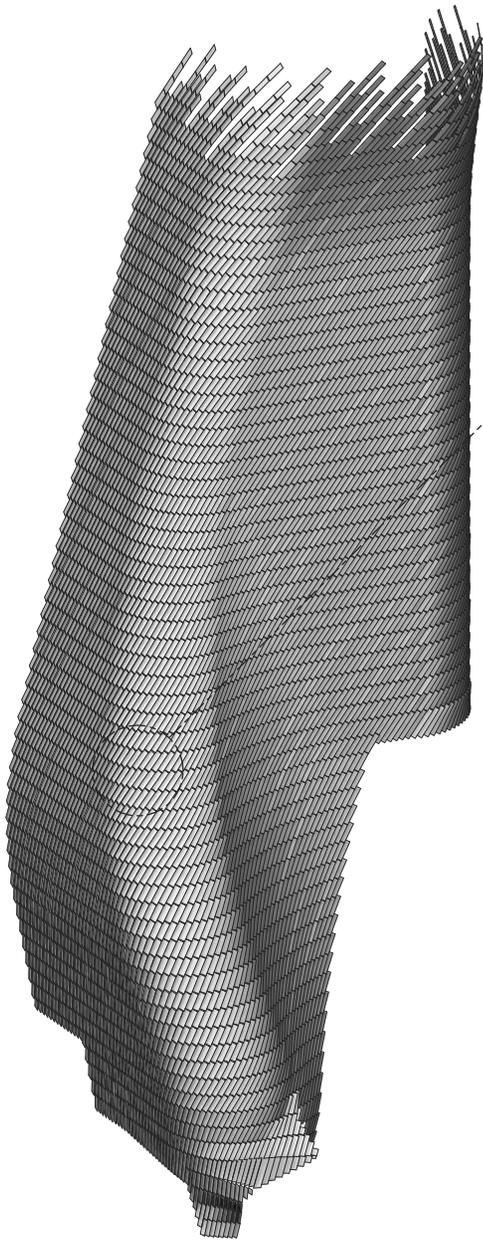

take dot product of **w** and unitized **n** and it's equals to d

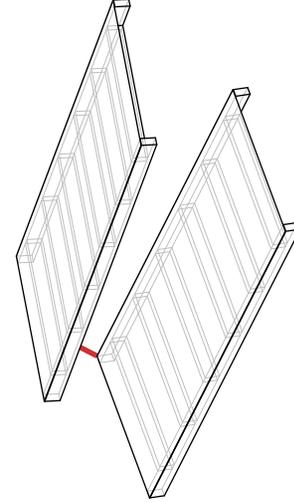

n is normal vector of parallel planes on which each line lies

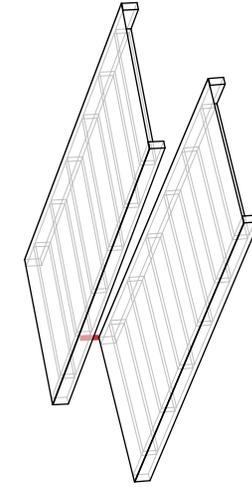

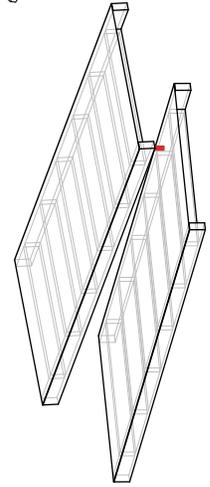

skew edges

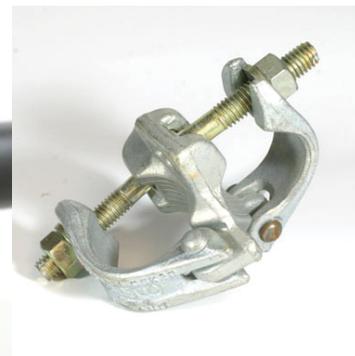

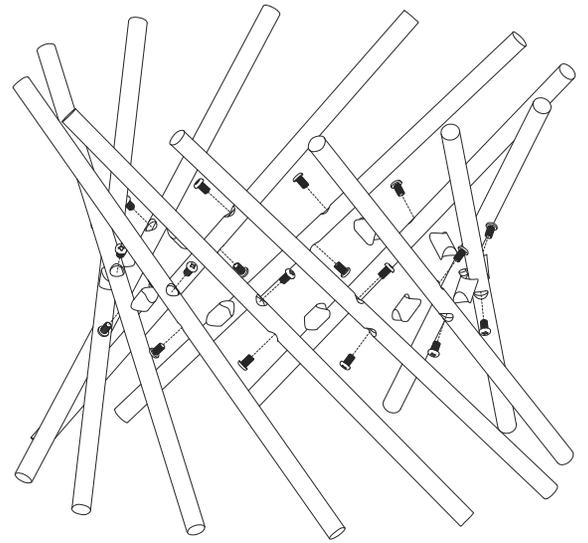

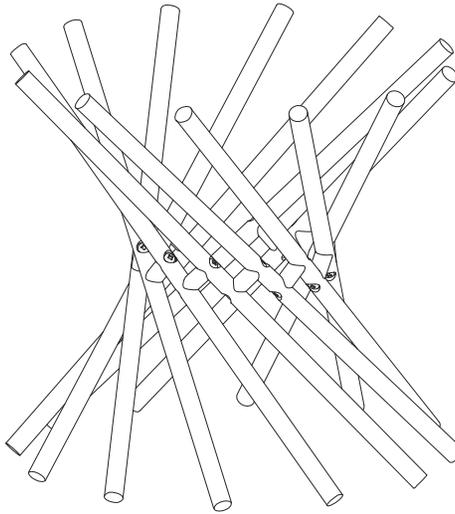

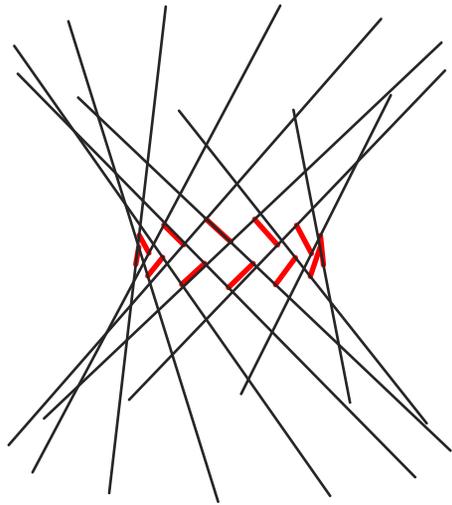

edge to corner

corner to back face

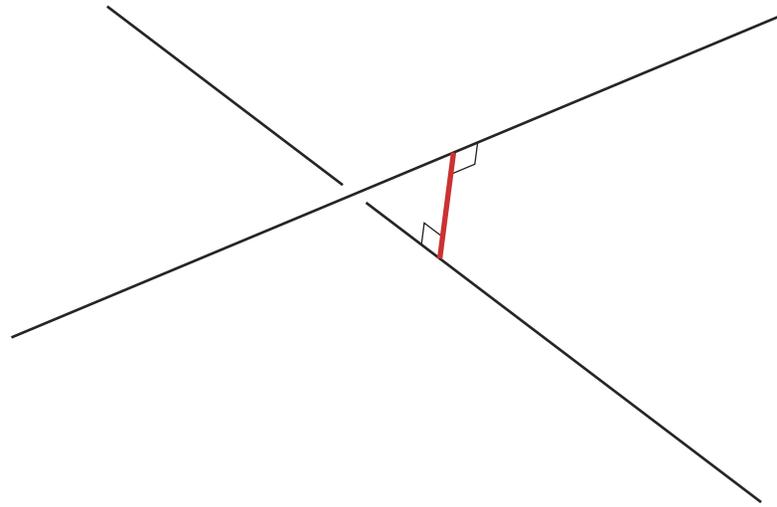

corner to front face

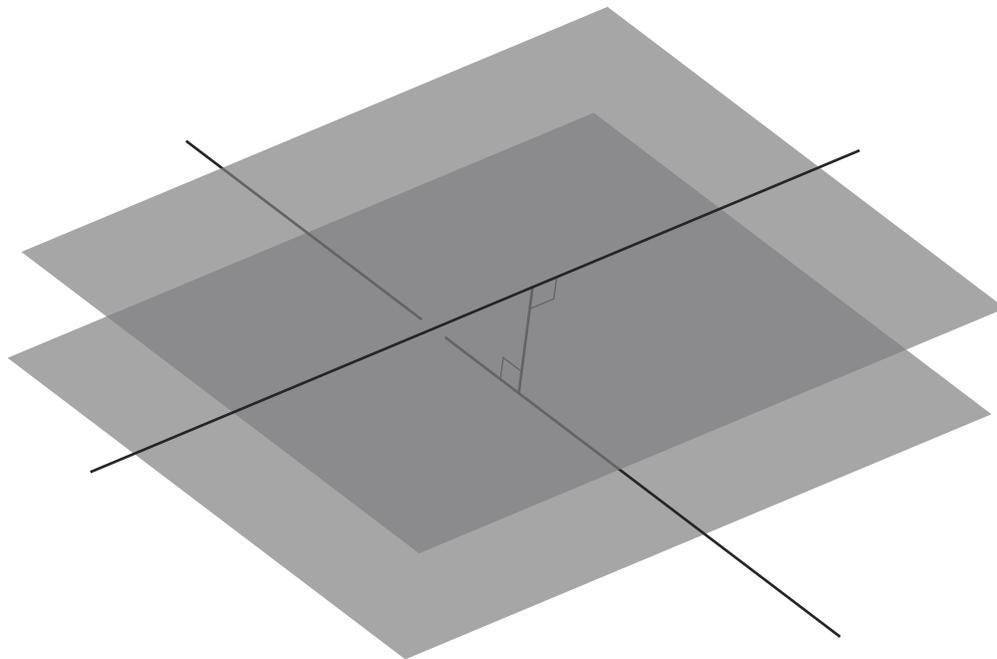

Installation by Ai Weiwei and Herzog & de Meuron

Draw skew lines and the shortest line between them without using “Minimum Distance Line” tool nor “Line Perpendicular to Two Curve” tool.

And make two parallel planes on which each skew line lie.
